

# Trending Strategy based on python & MySQL

PS.<sup>[1]</sup>

Lloyd 2024211330

## 1ST.Experiment Environment

1. MySQL
2. Pycharm

## 2ND.Tools

- CSDN
- Deepseek LLM
- (WindSurf is not available in my region.)

## 3RD.Data resources

- *tushare data community*(<https://tushare.pro/user/token>)
- 600519.GuiZhou Maotai Stock
- 2020-01-01 ~ 2024-12-31
- open/close/high/low

## 4TH.Steps

1. Find stock data resources from websites
2. Upload relevant data into MySQL
- 3.Connect MySQL to Pycharm
3. Implement trend following strategy in .py
4. Visualization

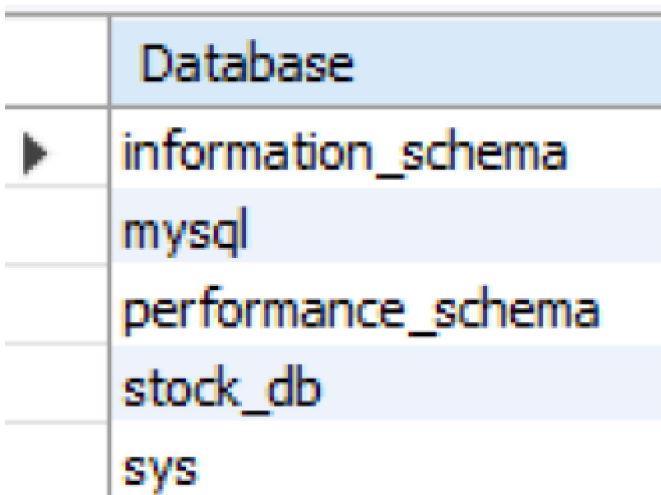

## STEP1 Get Data

1. Till now I only know how to webcrawl using MATLAB, haven't try python yet.
2. Many relevant websites set anti-crawl programs like 'cookies'.
3. Scheduled to use python lib - yfinance. But it doesn't work even with VPN. Searching for information and learn that it doesn't open to python services now.
4. Use open data resources in 'tushare' domestic. Sign & access to token, download relevant data into local .csv table with the assistance of python lib - tushare.

## STEP2 Upload to MySQL

1. Copy .csv to file C:/MySQL/Uploads for the upload of data.
2. Construct database & table in MySQL

use stock\_db here

```
1 * SHOW DATABASES;
2 -- 查看允许导入文件的目录
3 * SHOW VARIABLES LIKE 'secure_file_priv';
4 * CREATE DATABASE stock_db;
5 * USE stock_db;
6
7 -- 在MySQL中创建表（字段需与CSV列对应）
8 * CREATE TABLE maotai_stock (
9     trade_date DATE PRIMARY KEY,
10     open DECIMAL(10,2),
11     high DECIMAL(10,2),
12     low DECIMAL(10,2),
13     close DECIMAL(10,2)
14 );
15
16 -- 或 Windows路径
17 * LOAD DATA INFILE 'C:/ProgramData/MySQL/MySQL Server 8.0/Uploads/maotai_2020-2024.csv'
18 INTO TABLE maotai_stock
19 FIELDS TERMINATED BY ','
20 ENCLOSED BY '"'
21 LINES TERMINATED BY '\n'
22 IGNORE 1 ROWS
23 (trade_date, open, high, low, close);
24
25 * SELECT * FROM maotai_stock;
```

| trade_date | open    | high    | low     | close   |
|------------|---------|---------|---------|---------|
| 2020-01-02 | 1145.06 | 1116.00 | 1128.00 | 1130.00 |
| 2020-01-03 | 1117.00 | 1076.90 | 1117.00 | 1078.56 |
| 2020-01-06 | 1092.90 | 1067.30 | 1070.86 | 1077.99 |
| 2020-01-07 | 1099.00 | 1076.40 | 1077.50 | 1094.53 |
| 2020-01-08 | 1095.50 | 1082.58 | 1085.05 | 1088.14 |
| 2020-01-09 | 1105.39 | 1090.00 | 1094.00 | 1102.70 |
| 2020-01-10 | 1115.99 | 1102.50 | 1109.00 | 1112.50 |
| 2020-01-13 | 1129.20 | 1112.00 | 1112.50 | 1124.27 |
| 2020-01-14 | 1124.89 | 1103.00 | 1124.20 | 1107.40 |
| 2020-01-15 | 1121.60 | 1105.00 | 1109.01 | 1112.13 |
| 2020-01-16 | 1118.87 | 1102.58 | 1118.87 | 1107.00 |
| 2020-01-17 | 1112.78 | 1101.01 | 1110.00 | 1107.50 |
| 2020-01-20 | 1111.86 | 1082.00 | 1111.86 | 1091.00 |

successfully upload data

## STEP3 Connection build

```
import mysql.connector
import pandas as pd

1 usage
class StockDB:
    def __init__(self):
        self.conn = mysql.connector.connect(
            host=
            user=
            pass=
            database=
        )

1 usage
    def fetch_data(self):
        query = "SELECT trade_date, close FROM maotai_stock ORDER BY trade_date"
        df = pd.read_sql(query, self.conn)
        return df.set_index('trade_date')

1 usage
    def close(self):
        self.conn.close()
```

## STEP4 Trend following Strategy

1. Choose 5day-20day mean crossing strategy.

i.e.

- Buy in:  $5\_ma > 20\_ma$
- Sell out:  $5\_ma < 20\_ma$
- 5-day average: reflect short period fluctuations, capture market's realtime mood
- 20-day average: universal average for med-term trends

```
def generate_signals(df):
    # 计算均线
    df['5_ma'] = df['close'].rolling(5).mean()
    df['20_ma'] = df['close'].rolling(20).mean()

    # 生成信号 (1: 买入, -1: 卖出)
    df['signal'] = 0
    df.loc[df['5_ma'] > df['20_ma'], 'signal'] = 1
    df.loc[df['5_ma'] < df['20_ma'], 'signal'] = -1
    return df
```

## STEP5 Visualization

1. Use python lib - matplotlib/plotly to visualize strategy in ports

2. Generate 5 years visualization UI and save as .html

|                             |                |                      |       |
|-----------------------------|----------------|----------------------|-------|

1. Due to limited personal capability. The python codes in this method was mainly constructed by deepseek-r1. I do the rectification work. ↩
